Assignment 1 - Git & GitHub Fundamentals
Report Template

- ***Full Name:*** ***Mahmoud Garwallane***
- ***Student ID: 159629***
- ***Course Code & Section: CSC3324 01***
- ***GitHub Username:*** ***ivanmanthefool***

1. Repository Setup

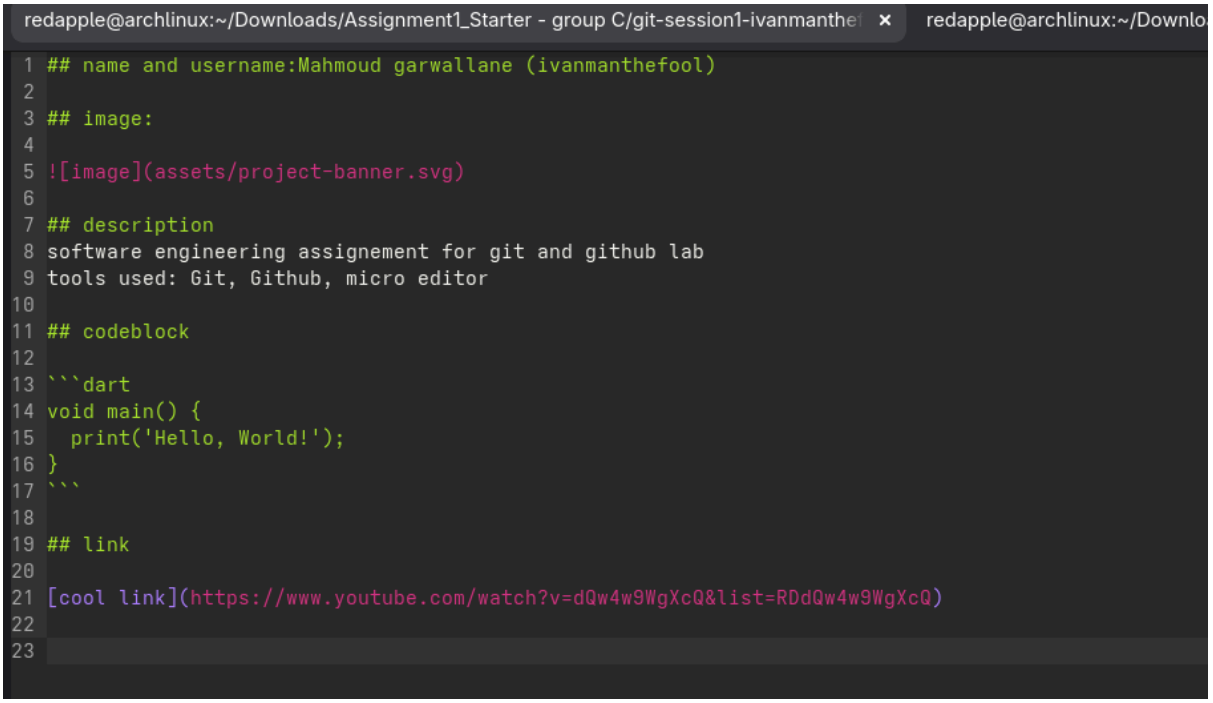

Briefly explain how you initialized the repository and what you ignored in .gitignore.

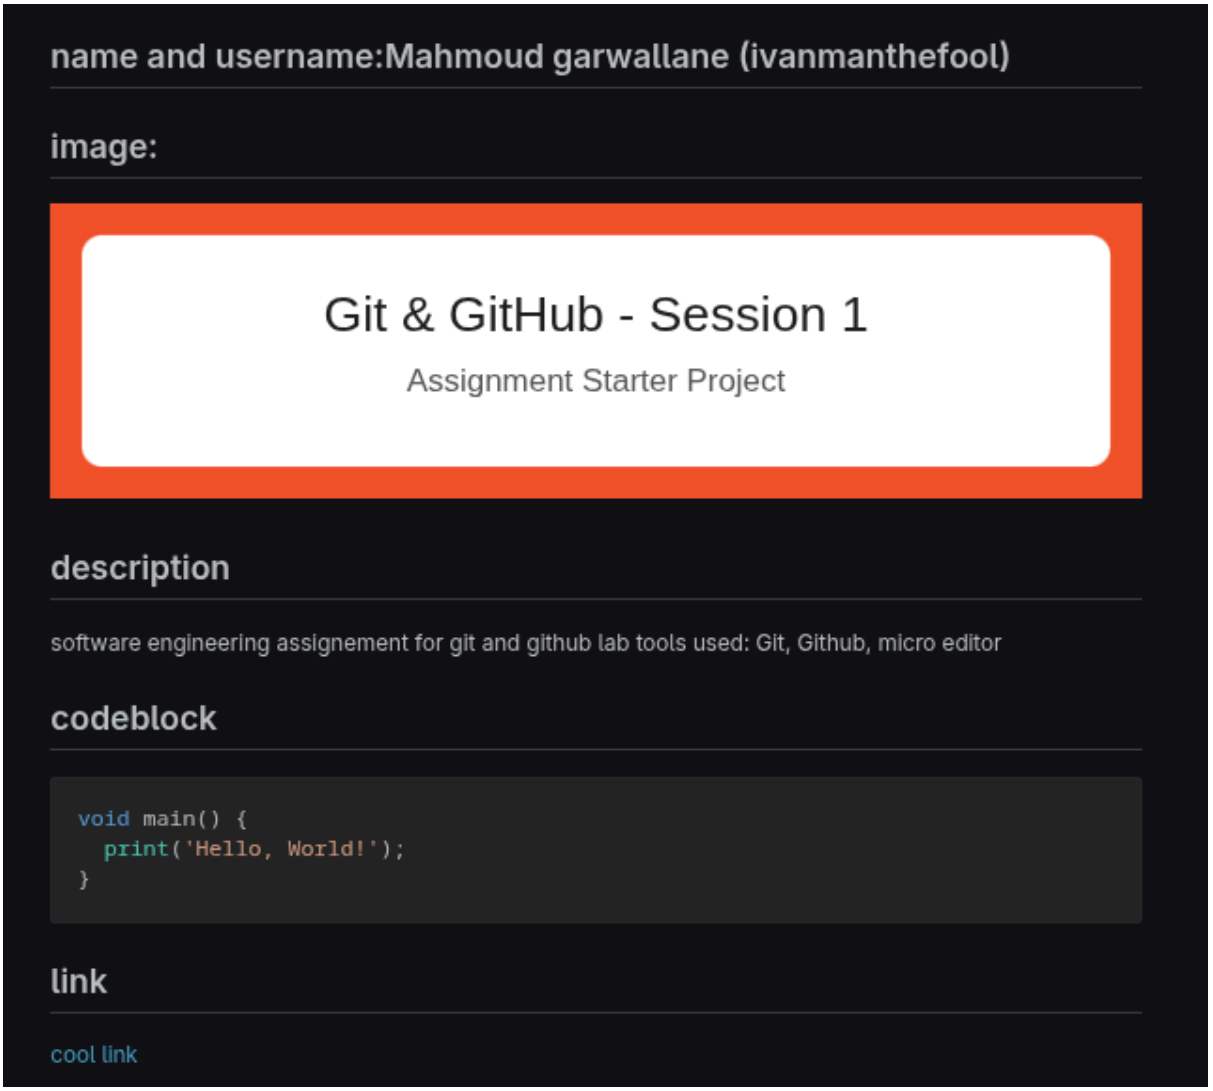

Initialized the repository and configured `.gitignore` to exclude temporary and log files.

2. README & Commit History

Briefly describe your README and how you organized your commits.

A simple readme didn't use any sort of commits to track the changes did that with other files

3. Selective Staging

Explain how you changed two files but committed only one of them first.

Staged one file by using git add “file name” instead of git add .

4. Branch & Merge

Briefly explain the feature branch you created and how you merged it into main.

created a feature branch named `feature/about`, made changes on the on a file in that branch and merge that branch to main

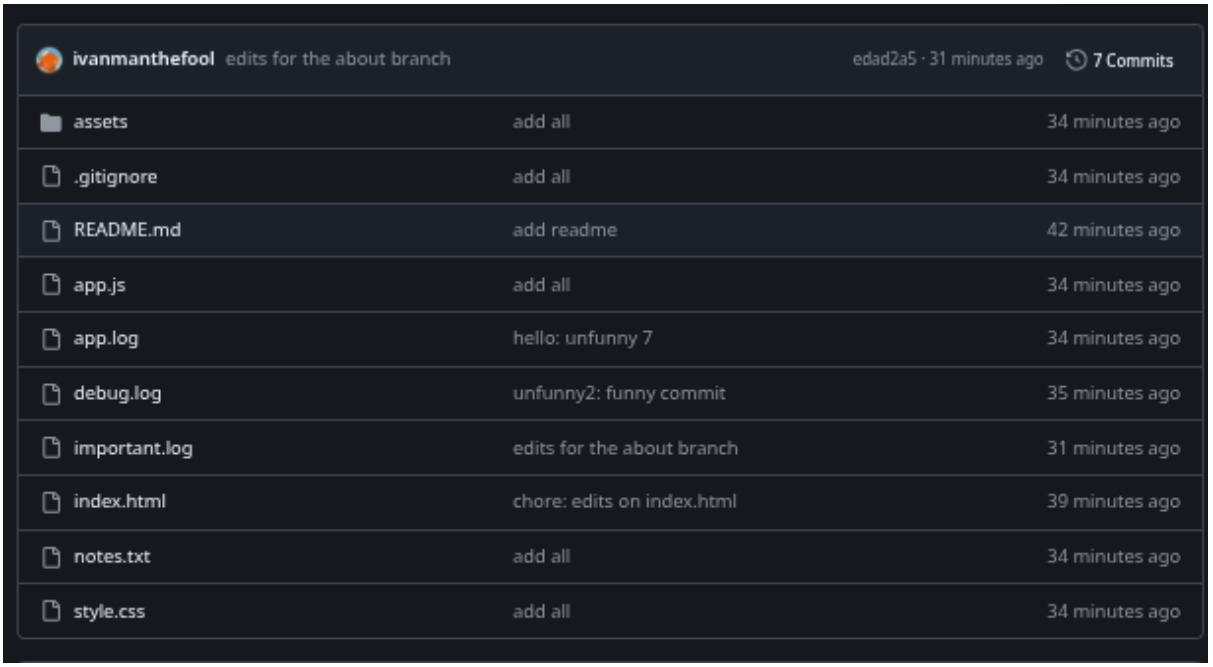

```
[redapple@archlinux git-session1-ivanmanthefool]$ git checkout -b feature/about
Switched to a new branch 'feature/about'
[redapple@archlinux git-session1-ivanmanthefool]$ ms
bash: ms: command not found
[redapple@archlinux git-session1-ivanmanthefool]$ ls
app.js  app.log  assets  debug.log  important.log  index.html  local.env  normal.log  notes.txt  README.md  style.css
[redapple@archlinux git-session1-ivanmanthefool]$ micro important.log
[redapple@archlinux git-session1-ivanmanthefool]$ git checkout main
error: pathspec 'main' did not match any file(s) known to git
[redapple@archlinux git-session1-ivanmanthefool]$ git checkout master
M       important.log
Switched to branch 'master'
[redapple@archlinux git-session1-ivanmanthefool]$ git checkout feature/about
M       important.log
Switched to branch 'feature/about'
[redapple@archlinux git-session1-ivanmanthefool]$ git add important.log
[redapple@archlinux git-session1-ivanmanthefool]$ git commit -m "edits for the about branch"
[feature/about edad2a5] edits for the about branch
 1 file changed, 1 insertion(+)
[redapple@archlinux git-session1-ivanmanthefool]$ git checkout master
Switched to branch 'master'
[redapple@archlinux git-session1-ivanmanthefool]$
```

5. Remote Changes

Explain the difference between commit and push, then fetch and pull.

Commit is a fingerprint for a local change whereas push adds it to the remote
Fetch doesn't touch your local changes whereas pull merges the remote with local and can cause conflicts

```
[redapple@archlinux git-session1-ivanmanthefool]$ git remote add origin https://github.com/ivanmanthefool/git-session1-ivanmanthefool.git
[redapple@archlinux git-session1-ivanmanthefool]$ git push -u origin main
error: src refspec main does not match any
error: failed to push some refs to 'https://github.com/ivanmanthefool/git-session1-ivanmanthefool.git'
[redapple@archlinux git-session1-ivanmanthefool]$ git push -u origin master

To https://github.com/ivanmanthefool/git-session1-ivanmanthefool.git
 * [new branch]      master -> master
branch 'master' set up to track 'origin/master'.
```

6. Fair Use of AI

AI assistance was used to convert the pdf template to a docx file from a picture

7. Sources & Reflection

List any useful sources you used. Then write 2-3 sentences on the hardest concept and what you would check first if Git behaves unexpectedly.

This is the history of the changes I did.

The hardest concept in my opinion is merging branches especially when there are conflicts, and I generally would solve this by using a gui app like github desktop instead of spending hours looking up commands

```
[redapple@archlinux git-session1-ivanmanthefool]$ git log --oneline --graph --all
* edad2a5 (HEAD -> master, feature/about) edits for the about branch
* 4d87d09 add all
* bc38cd5 hello: unfunny 7
* 7950776 unfunny2: funny commit
* f81fd69 joke: unfunnny
* f6a1980 chore: edits on index.html
* 64447fc add readme
[redapple@archlinux git-session1-ivanmanthefool]$
```
